Professional Summary

Python Developer with knowledge of web development technologies including HTML, CSS, and Tailwind CSS. Skilled in building responsive web applications and writing clean, efficient code. Familiar with backend development using Python and problem-solving techniques. Quick learner with a focus on performance optimization and user experience.

Technical Skills

- **Languages:** Python, Java
- **Web Technologies:** HTML, CSS, Tailwind CSS
- **Core Concepts:** Data Structures, OOP Concepts
- **Tools:** GitHub, VS Code

Projects

Python Based Project

Weather App (Mini project) :-

- SkyCast: A Real-Time Weather Forecasting Tool”.
- A sleek Python-based application that leverages OpenWeatherMap APIs to provide real-time meteorological data.
- The app delivers current temperature, humidity, wind speeds, and 5-day forecasts for any city globally, featuring a dynamic UI that changes based on the weather conditions.

Personal Finance Manager :-

- **Tools Used:** Python, Flask, SQLite, Matplotlib, ReportLab, HTML, and CSS.
- **Core Application:** Built a well-organized money-tracking app where different features—like logging in, adding expenses, and viewing charts—are kept neat and separate.
- **Secure Login:** Created a safe login system that strongly encrypts user passwords so their data stays protected.
- **Helpful Charts:** Made a dashboard with colorful charts that instantly show users how much they earn versus how much they spend.
- **PDF Downloads:** Added a button that lets users easily save and download their monthly spending reports and budget warnings as PDF files
